Allowable Subject Matter

2. Claims 1-16 are allowed.

3. The following is an examiner's statement of reasons for allowance: As per claim 1, the prior art fails to teach a vehicle air conditioning system comprising an air duct, a cooling heat exchanger, a heating heat exchanger, an external heat exchanger, a first variable throttle valve between the heating heat exchanger and external heat exchanger, a second variable throttle valve connected between the external heat exchanger and cooling heat exchanger, a dehumidifying mode circulation path, and specifically, a cycle efficiency sensing means, a cycle efficiency determination means, a first throttle valve control means controlling in accordance with a deviation between sensed target cycle efficiency and calculated cycle efficiency, and a second throttle valve control means controlling in accordance with a dehumidifying capacity of a cooling or heating heat exchanger. As per claim 12, the prior art fails to teach the elements of the present invention as described above, as well as a capacity overload sensing means, that, when activated, the throttle valve control means controls the degree of opening of any one of the first variable throttle valve and the second variable throttle

valve in accordance with the pressure deviation between a current high pressure sensing means and a target high pressure sensing means. As per claim 14, the prior art fails to teach the elements of the present invention as described above as well as a blowing temperature determination means, a dehumidifying mode selection means, heating capacity sensing means, and a heat capacity determination means.
